OPTION B: VIRTUAL REALITY TECHNOLOGY: A LEARNING REVOLUTION **KEY**

- 1 After decades of promises, makers of virtual-reality technology could soon be ready to give students a new and
2 powerful way to learn with immersive virtual field trips and science experiments. It's been claimed that kids don't
3 learn best from reading a book or looking at a blackboard. Potential educational apps provide users with virtual trips,
4 immersive digital learning games and simulations, and even therapeutic experiences for students with special needs.
5 Virtual reality is super-cool, but schools are still unable to buy basic digital technologies for classrooms.
6 Facebook paid \$2 billion to acquire Oculus, a new virtual reality headset known as "the Oculus Rift." This device
7 is actually a set of virtual reality glasses. Facebook founder, Mark Zuckerberg, described the Oculus device as a
8 "new communication gadget for gaming, entertainment, social networking, and classroom learning." At \$350 per
9 headset, the Oculus Rift – and its competitors – will try to make virtual reality devices available at a price that schools
10 and families can afford.
11 Numerous reports describe how Oculus inventor Palmer Freeman Luckey, who was 18 at the time and studied at
12 home, started developing his invention in his parents' garage, using the money he had earned repairing his friends'
13 iPhones. Mr. Luckey is said to have a prodigious vision of the future, as he has opened a promising path towards
14 scientific research.
15 Hopefully, the development and the use of Oculus headsets in the classrooms might become true soon.
16 Immersive virtual reality technologies help students learn by giving them a rigorous "inside view" of a structure – an
17 Egyptian pyramid, for example, or even the human body, which currently they observe only externally.
