

Tarajal

Hydrocotyle vulgaris

Scirpus holoschoenus

Mentha pulegium

Tamarix gallica

Vegetation that covers both the lower banks of the rivers and the edges of lagoons, flooded areas and even places with waters with high salt concentration. It is special in that it can enrich the soil it sits in with salt, thereby eliminating competing plants that cannot support salt.

However, it is not uncommon to see these plants accompanied by oleanders, bulrushes, canes, etc.

During autumn and winter, it takes on striking yellow and red colours.
